PREFACE

Patients expect the medicines they receive to be safe and effective. Healthcare professionals expect the medicines they prescribe, dispense or administer are potentially safe. Safety of medicinal products is the primary concern of any Medicines Regulatory Body in the world. Although the duties, responsibilities and scopes of these different parties may be different invariably the objective of safety remains comparable. Being vigilance on medicinal product is an integral element towards assurance of the safety of medicinal products.

Success of any pharmacovigilance system depends on the generation of reports and the subsequent procedures. This document provides guidance to all the stake holders including NMRA, institutes and individuals who submit reports about their roles.

1. INTRODUCTION

National Medicines Regulatory Authority Act No. 05 of 2015 and rules and regulations thereof provide legal provisions for pharmacovigilance in Sri Lanka. Pharmacovigilance, as defined by the WHO is "the science and activities related to the detection, assessment, understanding and prevention of adverse drug effects or any other possible drug-related problems.

In line with this general definition it is clear that scope of pharmacovigilance is not limited to adverse reactions. It also includes lack of efficacy, medication errors, counterfeit medicines, abuse or misuse and interactions of medicines. On some occasions there may be an inter relation among these elements. For example, complaint received as an incident of lack of efficacy may be due to a counterfeit product. Cluster of adverse reactions may reveal a serious quality defect of a particular product. Irrespective of the type of the problem it affects the safety of medicines.

Underlying objectives of our pharmacovigilance system is preventing harm from adverse reactions or any other drug related problems and promoting the safe and effective medicines in particular through providing timely information about the safety of medicines to patients, healthcare professionals and the general public.

Ultimate objective of Pharmacovigilance is therefore safety of medicines.

GL-016- Pharmacovigilance Guideline Version and Revision Number/Code: V 1.0 / Rev No :0

Of late, number of New Chemical Entities and Similar Bio Therapeutic Products that received market authorization in Sri Lanka has been significantly increased. Due to the policy of the government to encourage local manufacturing of pharmaceuticals, considerable number of new manufacturers has emerged within the Island. In this scenario, strengthening Pharmacovigilance system in Sri Lanka has been a timely necessity.

2. OBJECTIVES OF ADVERSE DRUG REACTIONS MONITORING

- 1. Early detection of previously unknown adverse reactions
- 2. Recognition of increases in frequency of a known adverse reaction
- 3. Generate new hypothesis on ADRs that are specific to the local population
- 4. Quantitative analysis of benefit/risk ratio
- 5. Dissemination of information on ADRs for rational medicines prescribing and regulations
- 6. Identifying problems with batches or product of medicines

3. ABBREVIATIONS

ADRs - Adverse Drug Reactions

CEO - Chief Executive Officer

ICSR - Individual Case Safety Report

MEC - Medicines Evaluation Committee

MSD - Medical Supplies Division

NMQAL - National Medicines Quality Assurance Laboratory

NMRA - National Medicines Regulatory Authority

PV division – Pharmacovigilance Division

SAFRESC- Safety and Risk Evaluation Sub Committee

UMC - Uppsala Monitoring Centre

WHO - World Health Organization

WHO-ART - WHO Adverse Reaction Terminology

4. GLOSSARY OF TERMINOLOGY

Adverse Event:

Any untoward medical occurrence that may present during treatment with a medicine but does not necessarily have a causal relationship with the treatment

GL-016- Pharmacovigilance Guideline Version and Revision Number/Code: V 1.0 / Rev No :0

Adverse Reaction:

Any response to a drug which is noxious and unintended and occurs at normal doses

Causality Assessment

The evaluation of the likelihood whether a medicine was the causative agent of an observed adverse reaction.

Quality Failure

Any deviation of a genuine medicine authorized by the National Medicines Regulatory Authority, from the quality specifications set for them by the manufacturer specifications (official pharmacopoeia or in-house specification)

Serious Adverse Event:

Any adverse event that:

- Is fatal
- Is life threatening
- Is permanently/significantly disabling
- Require prolong hospitalization
- Causes congenital anomaly
- Requires intervention to prevent permanent impairment or damage

Side Effect:

Any unintended effect of a drug occurring at normal doses, which is related to the pharmacological properties of the Medicine

Unexpected Adverse Reaction

An adverse reaction the nature or severity of which is not consistent with domestic labeling or market authorization or expected from characteristics of the medicine.

Signal:

The term refers to reported information (at least 3 spontaneous case reports) on a possible causal relationship between an adverse event and a drug, the relationship being unknown or incompletely documented previously

GL-016- Pharmacovigilance Guideline Version and Revision Number/Code: V 1.0 / Rev No :0 Effective Date: 15/10/2019 Page 5 of 12

5. PROCEDURE FOR REPORTING ADVERSE DRUG REACTION

Spontaneous reports are the main source of information in the pharmacovigilance system of Sri Lanka. This chapter explains the procedure for spontaneous reporting of adverse reactions.

ICSR forms for reporting ADRs is available on the web site of the NMRA (<u>www.nmra.gov.lk</u>) In addition, printed copies of the forms have been distributed among the pharmacy departments/sections of the Government Health Care Institutes. Requests from the Health care professionals or institutes for reporting forms should be made to the Pharmacovigilance Division of the NMRA.

6. INDIVIDUAL CASE REPORTING FORMS

ICSR forms have been designed to collect the essential information required for proper assessment of the ADR case report. Information to be filled in the ICSR forms can be categorized under the following headings.

- Information on the patient
- Information on the suspected medicine/medicines
- Description on the Adverse reactions
- Information on management of the adverse reactions.
- Information about the reporter

In order to overcome high level of missing data in the ADR reports on suspected anaphylactic reactions PV division has introduced a separate form for reporting of anaphylaxis which would capture all the important data.

7. **PRIORITIES FOR REPORTING**

Pharmacovigilance Division encourages to reporting even seemingly insignificant or common adverse drug events as it is required to establish a reporting culture in Sri Lanka. However, more emphasis should be made on the following categories.

- All suspected reactions for new medicines
- All serious or unexpected suspected reactions for established or well-known medicines
- Increased frequency of a given reaction

• All suspected ADRs associated with medicine- medicine, medicine - food or medicine - food supplements

• ADR on special field of interests such as medicine abuse and medicines used during pregnancy and during lactation

• Suspected ADRs associated with medicine withdrawals

GL-016- Pharmacovigilance Guideline Version and Revision Number/Code: V 1.0 / Rev No :0 Effective Date: 15/10/2019 Page 6 of 12

- ADRs due to overdose or medication error
- Lack of efficacy or pharmaceutical defects

8. PROCESSING OF COLLECTED ADVERSE DRUG REACTION DATA

On receipt of a completed ICSR form the Pharmacovigilance pharmacist would ensure that the form has all the essential information before proceeding to perform the causality assessment. If the essential information is missing in the report PV pharmacist should contact the reporter and collect the necessary information to complete the form. Follow-up information can be obtained, via a telephone call and/or site visit and/or a written request. It is important to continue follow-up and report new information until the outcome has been established or the condition is stabilized.

PV pharmacist should inform the reporter/reporting institute to submit the samples of the suspected medicine directly to the NMQAL if it is required to do so. Samples should always be submitted with the required information.

It is important that at the time of the original report, sufficient details about the patient and reporter be collected and retained to enable future investigations.

Following the initial review Head of the PV division may take an immediate action such as withhold of the particular product as a precautionary measure where it is necessary. Approval of the CEO must be obtained prior to such action.

In case where expert opinions are required Head of the PV division can call for an immediate SAFREC meeting.

PV division should perform causality assessment for all serious ADR reports within 07 calendar days using appropriate tools. Where PV division is unable to reach a conclusion on the causality opinion of the SAFREC must be sought.

After causality assessment has been performed, the Head of pharmacovigilance should document all the findings and sign the form.

An acknowledgement letter or message should be sent to the reporter for every ADR report. The ADR reports shall be stored in a confidential database at the PV Division. All appropriate reports would be entered in the Global data base (VigiFlow)

9. WHO CAN SUBMIT THE REPORTS?

Medical Professionals preferably Doctors, Dentists, Pharmacists and Nurses can submit ADR reports to the PV division.

GL-016- Pharmacovigilance Guideline Version and Revision Number/Code: V 1.0 / Rev No :0 Effective Date: 15/10/2019 Page 7 of 12

10. TIME LINES FOR REPORTING

Any suspected ADR should be reported as soon as possible. In case of serious adverse events reporting should be done within 24 hours. Delay in reporting will make reporting inaccurate and unreliable. If possible, report while the patient is still in the health facility this gives a chance to reporter to clear any ambiguity by re-questioning or examining the patient.

Additional sources of information

Complaints received from medical professionals, patients, mass media and the data base of the MSD may also trigger collection of further details.

11. SAFETY AND RISK EVALUATION SUB COMMITTEE (SAFRESC)

There would be an expert committee appointed by the NMRA which shall be named as Safety and Risk Evaluation Sub Committee (SAFRESC). The Committee provides advices and technical assistance to the division pertaining to the subject.

Members of the SAFRESC

- 1. Head of the PV Division
- 2. Two Pharmacologists from two different recognized universities in Sri Lanka
- 3. Two pharmacists attached to the PV unit
- 4. Immunologist, Medical Research Institute
- 5. Consultant Physician, NHSL
- 6. Director, NMQAL
- 7. Chief Pharmacist Technical Unit of NMQAL
- 8. Representative from the FHB
- 9. Representative from the Epidemiology Unit
- 10. A pharmacist representing MSD

Members of the SAFRESC would be appointed according to an approved procedure. Each appointment would be valid for a period of 3 years. Each member of the committee would be paid honorarium for attending the meeting. Meeting of the SAFRESC be hold on 3rd Thursday of every month at 2.00 pm. In case of an emergency Head of the PV Division can call an emergency meeting.

12. FEEDBACK

6.1 Staff and customers may provide feedback about this document by emailing info@nmra.gov.lk.
